Planning care in advance

1: Principles

Aim of this worksheet
To understand the principles of planning care in advance

How to use this worksheet
- You can work through this worksheet by yourself, or with a tutor.
- Read the case study below, and then turn to the Work page overleaf.
- Work any way you want. You can start with the exercises on the Work page using your own knowledge. The answers are on the Information page - this is not cheating since you learn as you find the information. Alternatively you may prefer to start by reading the Information page before moving to the exercises on the Work page.
- This CLiP worksheet should take about 15 minutes to complete, but will take longer if you are working with colleagues or in a group. If anything is unclear, discuss it with a colleague.
- If you think any information is wrong or out of date let us know.
- Use the activity on the back page and take this learning into your workplace.

Case study
Bill is a 54 year old man with epilepsy who developed weight loss and intermittent diarrhoea. Investigations showed a carcinoma of the colon. At a previous appointment he was clear that he wanted to know the results, and the presence of cancer was discussed.

It was also explained that surgical removal of the tumour is possible, so he has come today to discuss his options.
**Planning care in advance**
- The Mental Capacity Act (2005) is central to all plans that require a proactive, coordinated response.
- Person-centred general care planning is a key part of care in all children, young people and adults.
- This is a process of discussion and review in young people and adults to anticipate how their condition may affect them in the future.

**Key points about planning care in advance**
1. **F** This is a voluntary process and individuals with capacity have the right to refuse to take part. Some may feel unable to engage in the process or that the time is not right for them. Consequently it is impossible to have a target requiring all patients to plan their care in advance.
2. **F** Although the decisions of individuals with capacity are paramount, the opinions of individuals who lack capacity must be taken into account.
3. **F** In people who lack capacity, the decisions must be made using the best interests process of the Mental Capacity Act (see CLiP worksheet *Issues around capacity and Best Interests*). This includes taking into account the opinion of the individual.
4. **F** As long as a patient retains capacity for those care decisions, the patient’s decision always take priority. Any decisions resulting from the ACP process only become active when the patient loses capacity.
5. **T** Advance care plans have no agreed definition in the UK and are not mentioned in the Mental Capacity Act (MCA). Before they can be used it has to be decided where they fit within the MCA and this is prone to misinterpretation and takes time which may not be available.
6. **T** Outcomes do not have to be written documents, they can be verbal from conversations with the patient. If the patient agrees, a record of that conversation can be made in their health record.

**Prompts for starting care planning discussion**
*Examples include:* an individual's request to discuss future care; a new diagnosis of life-limiting or life-threatening illness; a significant change in treatment, eg. complications of dialysis, failure of second-line chemotherapy; following multiple hospital admissions or crises; a deterioration in health.

**Issues that make a care planning discussion difficult or impossible**
*These include:* you have not been trained in initiating an ACP discussion; the individual is reluctant or refusing to discuss the future; the individual is adjusting to a new care environment and carers; the presence of troublesome physical symptoms; the presence of troublesome anxiety, low mood or anger.
*Note:* none of these are reasons not to have the discussion but should prompt you to ask for help and advice or have a colleague sit in with you.

**Possible outcomes of a discussion on planning care in advance**
*Advance statement:* this can be verbal or written and must be made when the individual has capacity for those care decisions. It is a record of an individual’s wishes and feelings, beliefs and values. It is not legally binding, but once the individual loses capacity for those care decisions all carers are legally bound to take it into account when making decisions in the patient’s best interests.

*Making advance decisions for anticipated emergencies:* this can be an Emergency Health Care Plan (EHCP) which individualises decisions and can be used to limit treatment or ensure that all treatment should be considered. Such a plan can be written with a person who has capacity, or on behalf of a person who lacks capacity using the MCA best interests process (see CLiP worksheets *Issues around capacity and Best Interests*).

*An Advance decision to refuse treatment (ADRT)* can be this can be verbal or written, but only an 18yr old with capacity can write a legally binding ADRT (see CLiP worksheet *Advance decision to refuse treatment*). In some situations the individual may wish to discuss cardiopulmonary resuscitation, something that would be important for an individual at risk of respiratory failure.

*Lasting Power of Attorney (LPA):* this is a legal authority made by a patient when they have capacity to nominate another person to make decisions on their behalf should the patient lose capacity in the future. A Property and Affairs LPA has no authority to make health care decisions; these can only be made by a personal welfare LPA (also known as a Health & welfare LPA) who must have specific authorisation in the order if the patient wishes them to make life-sustaining decisions.
1. All individuals should plan their care in advance  
True  False

2. Only individuals with capacity can plan their care in advance  
True  False

3. Individuals who lack capacity cannot have their care planned in advance  
True  False

4. Decisions resulting from planning care in advance always take priority  
True  False

5. Advance care plans have no definition or legal status  
True  False

6. A verbal decision is a valid outcome of planning care in advance  
True  False

Write down some situations and events which could prompt a discussion around planning care in advance

Think about what issues could make you hesitate about having an discussion around planning care in advance

Write down some outcomes of a discussion on planning care in advance
What was a patient’s reaction the last time you observed their future care being discussed?

15 minute worksheets are available on:

- An introduction to palliative care
- Helping the patient with pain
- Helping the patient with symptoms other than pain
- Moving the ill patient
- Psychological and spiritual needs
- Helping patients with reduced hydration and nutrition
- Procedures in palliative care
- Planning care in advance
- Understanding and helping the person with learning disabilities
- The last hours and days
- Bereavement
